

MOBILE AND MULTI-PURPOSE: THE NEW QUADRO MULTI TROLLEYS BY DURABLE

Paperworld 2019, hall 3.0, stand B81 // Extremely versatile small trolley on castors for the workplace // Subtle colours, modern design

Iserlohn/Frankfurt a. M., 26/01/2019: Open-plan offices, meeting points, service-oriented reception areas: New work concepts require flexible furnishing solutions. At Paperworld 2019, DURABLE is presenting the QUADRO Multi Trolleys, a modern, multi-purpose trolley range for modern work environments. The rolling small furniture is available as BASIC and also as ADVANCED models, which come with extended features. Thanks to their compact dimensions and elegant colours in yellow, ice blue or toffee, the QUADRO Multi Trolleys match any working environment. They are available from March 2019.

Go and stop

Fewer and fewer employees have fixed stationary workstations. For example, a staff member might concentrate on creating a presentation in the quiet area on Monday, and work on it further with colleagues in the meeting zone on Tuesday. In the process, the necessary documents and equipment must move together with them. This mobility is also required for catering, to make sure that coffee, tea etc. are accessible everywhere. This is where the new QUADRO Multi Trolleys shine – equipped with four stable, low-friction castors, they are ideal furniture for transport and storage. Two of the castors have brakes to ensure the trolley remains firmly in the desired location. The ADVANCED models come with handles for convenient movement.

Practical

The trolleys are made from high-density fibre boards, which is particularly robust, scratch-proof, moisture- and flame resistant. They come with a soft-close drawer that closes itself softly and gently at only a light push. The remaining storage space can be divided individually with a variable, adjustable shelf. In the BASIC model, the storage space is open and accessible. In the ADVANCED variant, it can be closed with a door. All trolleys have two cable slots – one each at the rear and base. That makes it easy to transport electrical equipment like laptops or coffee machines, and connect them to the power supply at the destination.

Design-oriented

Premium materials, a clear design vocabulary, rounded handles and the fresh, timeless colours make the trolleys functional designer furniture that look just as good in office and conference rooms as in medical practices, legal offices, reception areas or at home.

Versatile

The new multi-purpose trolleys can be used flexibly in a wide range of working environments:

- as office furniture
- in home offices
- as a service trolley in conference rooms
- at meeting points
- at events
- and in waiting areas in doctors' practices, insurance companies, administrative departments, service companies etc.
