

PRESS RELEASE

**Weather the weather, whatever the weather.
Protect your information and display it anywhere you need to!
New, waterproof document pockets from DURABLE**

Available now: Document pockets for displaying outside and in damp surroundings // Sizes A4 and A3 // Three different attachment options

Iserlohn, 09.11.2021 “Attention! Works Entrance!”, “Open from 9:00 am”, “Today’s offer”. That’s just some examples of information that has to be placed right outside your premises in a place where it can’t be missed. If you don’t want to make expensive signs yourself and don’t relish the idea of changing the information regularly, DURABLE has the ideal solution. The company now makes waterproof, temperature-resistant and UV-resistant document pockets that are TÜV-certified according to the IPX5 regulation. Depending of the model in question, the pockets can hold two A4 or two A3 sheets of paper, which can be easily replaced whenever you need. The new waterproof document pockets are now available from specialist retailers and online at durable.de.

Extremely robust

Heat, cold, rain, dirt – it’s all no problem for the new document pockets from DURABLE. They are temperature-resistant from -20°C to 60°C. Their water resistance is TÜV-certified according to the IPX5 regulation. Both the material of the pocket and the press stud fastening are waterproof. This ensures that the papers inside the pocket are protected from spray from all directions. The pockets can be wiped and disinfected, making them ideal for both dirty environments such as building sites as well as for areas with special hygienic requirements such as hospitals or swimming pools. On top of that, the pocket does not reflect any light.

Your choice of attachment options

DURABLE’s waterproof document pockets are available with three different attachment options:

PRESS RELEASE

The self-adhesive version is attached entirely using transparent, self-adhesive pads, which can be removed again without leaving any residue. The A4 size display pockets come with four self-adhesive pads and the A3 size comes with six. The self-adhesive version is particularly suitable for window panes and smooth surfaces.

The magnetic version comes with two magnetic strips that have an adhesive force of $0.95\text{N}/\text{cm}^2$ per strip. This option is recommended for attaching notices to metal surfaces such as shelves and doors.

The third version is a display pocket that is attached with two cable ties. This allows it to be attached to chain-link or building site fences.
